# Assessment and investigation of patient with upper GI bleed

DR KAMARA EVAN
EMERGENCY MEDICINE RESIDENT
MAKERERE COLLEGE OF HEALTH SCIENCES

### Always - ABCDE!

Special attention to hemodynamic stability

Is the patient stable or not?

#### Airway

- Can they speak?
- Do you hear abnormal sounds? eg. Gurgling
- ► If blood or vomitus present, suction or wipe
- If unconscious, do chin lift head tilt and follow the CPR protocols
- Consider putting in recovery position

#### Breathing

- Is breathing fast? RR>20
- Are there abnormal breath sounds?
- Check oxygen saturation. Hypoxic if <92% If hypoxic give oxygen</li>
- If unconscious with very slow breathing, start BMV and follow the CPR protocol
- Paediatric patients RR>40 (1-5yrs) RR>50 (2-12mths) RR >60 (neonate)

#### Circulation

- Diaphoresis
- Cool moist extremities
- Capillary refill >3s
- Tachycardia HR>100
- Hypotension SBP<90 DBP <60</p>
- Remember Orthostatic hypotension drop in BP of 10-12 or increase in HR of 10-12
- Reduced urine output <5ml/kg/hr</p>
- Paediatric patients >160(neonate) >150(1-3yr) >140(4-5yr)

### Disability

- GCS or AVPU
- Place in recovery position
- Check blood glucose levels

#### Exposure

- Check for massive bleed by doing a rectal exam
- Cover to prevent hypothermia
- Note temperature

### History

- ► S symptoms
- A- allergies
- M- medications
- P –past medical history
- L- last meal
- ► E events leading to presentation

#### History - Symptoms

- Hematemesis (bright red ,coffee ground vomitus)
- Hematochezia (bright red blood per rectum)
- Melaena (dark tarry stool)
- Syncope
- Weight loss
- Change in bowel habits

#### Medications

- NSAIDS
- Anti-coagulants

#### Past medical history

- PUD
- Malignancy
- Diverticulosis
- Bleeding disorders

#### Investigations

- CBC; Hb<7, platelets<50000</li>
- Coagulation screen ;PTT ,INR
- RFT; decreased GFR, increased BUN
- LFT; increased ALT,AST, decreased albumin
- ECG; myocardial ischaemia
- Ultrasound; collapsed IVC, hyperdynamic left ventricle
- Endoscopy ; indicated in on-going bleeding, hemodynamic instability or severe anaemia

# Thank you for listening
